

ONBOARD360 — Operational Problem Statement & Business Case

1. Operational Friction & Context

NovaBank International processes 520,000 onboarding applications annually across UK/EU, US, APAC, and LatAm. The current onboarding lifecycle takes an average of 58.70 hours from application submission to account funding, with 89.3% (52.42 hours) consumed by idle queue buffers between disconnected departments.

2. The Rework & Defect Crisis

First-pass yield stands at only 58.12%, forcing 33.35% (173,429 applications) into manual rework loops. Blurry images (42.1%) and expired identification (23.0%) drive over 65% of all rework cases. Customer drop-off reaches 16.25%, with 82.8% of inbound support inquiries being 'Where is my account?' status calls.

3. Financial & Strategic Impact

Direct operating expenses exceed \$27.96M annually (\$67.45 per completed account). The ONBOARD360 initiative modernizes this architecture via client-side computer vision, fuzzy watchlist screening, and AI exception triage to compress cycle times under 24 hours and deliver \$22.09M in annual recurring savings.
