

ONBOARD360 — Target Solution Architecture & Systems Blueprint

1. Architectural Paradigm

An event-driven microservices architecture built on Apache Kafka, containerized Python/FastAPI services, PostgreSQL 15 relational master storage, and Redis session caching.

2. Machine Learning & Human-in-the-Loop Governance

The AI Exception Triage Engine scores and routes non-STP cases. Low-risk document defects are routed to automated WhatsApp self-service, while High-Risk, PEP, and sanctions alerts are strictly quarantined for human compliance review, ensuring 0% regulatory leakage.

3. Enterprise Integration Tier

Synchronous REST adapters interface with legacy core banking ledgers for real-time IBAN provisioning and instant Apple Wallet card tokenization.
